

## OUR SERVICE

Finally, a permanent valve system to help you gain quick control of your system! The EZ Valve II™, now available in 16" (available sizes 4" - 12", 16"), is a complete R/W valve that can be installed in under 2 hours with only one excavation needed. Unlike cutting in a valve, with the EZ Valve II™ system, you can install your valve under pressure without stopping service to your customers. RMS Utility Service's fully self sufficient team arrives at your jobsite ready to go without requiring you to provide workers for the job. Choose the EZ Valve II™ system for your next valve insertion project and get your system under control!

## FEATURES

All ductile iron construction, stainless steel trim, same number of turns as your existing R/W valves and meets C509 construction standards. The EZ Valve II™ is an excellent tool to gain critical control of your system. Over 10,000 valves installed in the United States alone - many in your own cities. This valve works equally as well in waste water applications and anywhere where shut down is not an option. Available in 4" - 12" & 16" sizes and valves are in stock for immediate installation.

- **Control Time:** Installed in under 2 hours
- **Control Cost:** Single excavation means huge restoration savings
- **Control Service:** No service disruption to your customers
- **Control Quality:** Longer lasting ductile iron construction for dependability

*"The EZ Valve II™ only requires a single excavation and is a very useful tool that is the perfect fit for our village's many applications"*

Chris Settiani, Underground Utilities  
Superintendent, Village of Carpentersville, IL
